

TYPE: MODEL:

PROJECT:

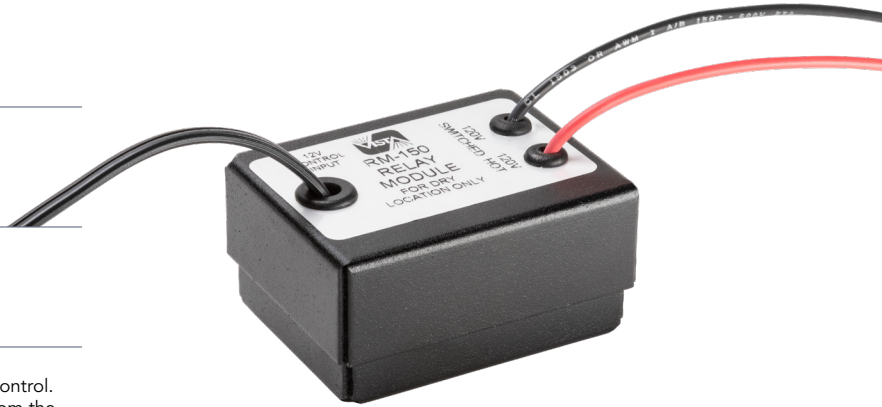

DESCRIPTION

Transformer relay module for fully synchronized on/off operation of linked transformers.

Eliminates multiple timers and/or photocells on each transformer.

Optimized for wide operating voltage range - 5 VAC to 30 VAC.

First "slave" unit receives 12VAC input from "master" transformer for on/off control. Subsequent "slave" units can be wired back to the master or daisy-chained from the first "slave" unit.
